# Azure DevOps MCP – Story-to-PR Workflow (Using VS Code + GPT 5.2 Codex + GitHub Copilot)

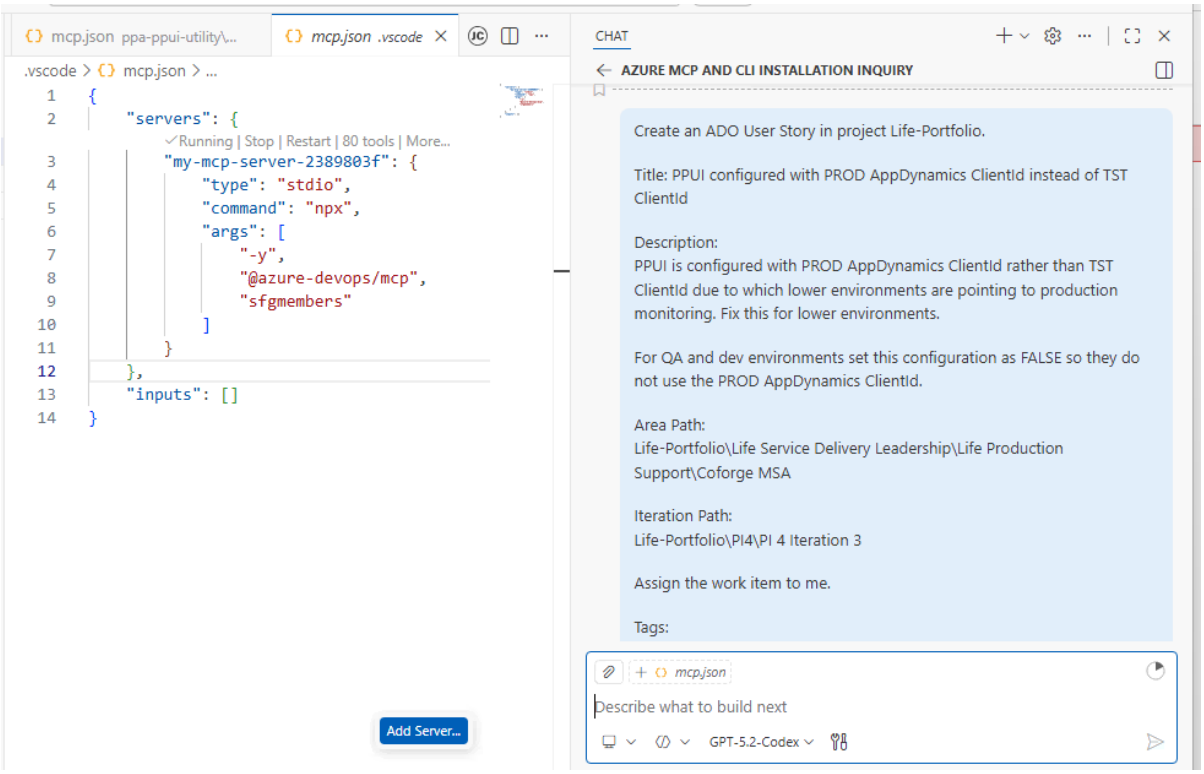
**Objective (One-liner):** Implemented an end-to-end Azure DevOps MCP flow—from story creation to PR creation and review—using VS Code, GPT 5.2 Codex, and GitHub Copilot, while fixing a minor AppDynamics config bug in an Angular app.

## Context

- **Change:** Minor bug fix related to **AppDynamics configuration** in an Angular application.
- **Tooling:** VS Code, **Azure DevOps MCP** (via `mcp.json`), **GPT 5.2 Codex**, **GitHub Copilot**.

## MCP Setup

- Configured **`mcp.json`** to enable Azure DevOps MCP tools.
- Used GPT 5.2 Codex in VS Code to orchestrate ADO operations via MCP tools.

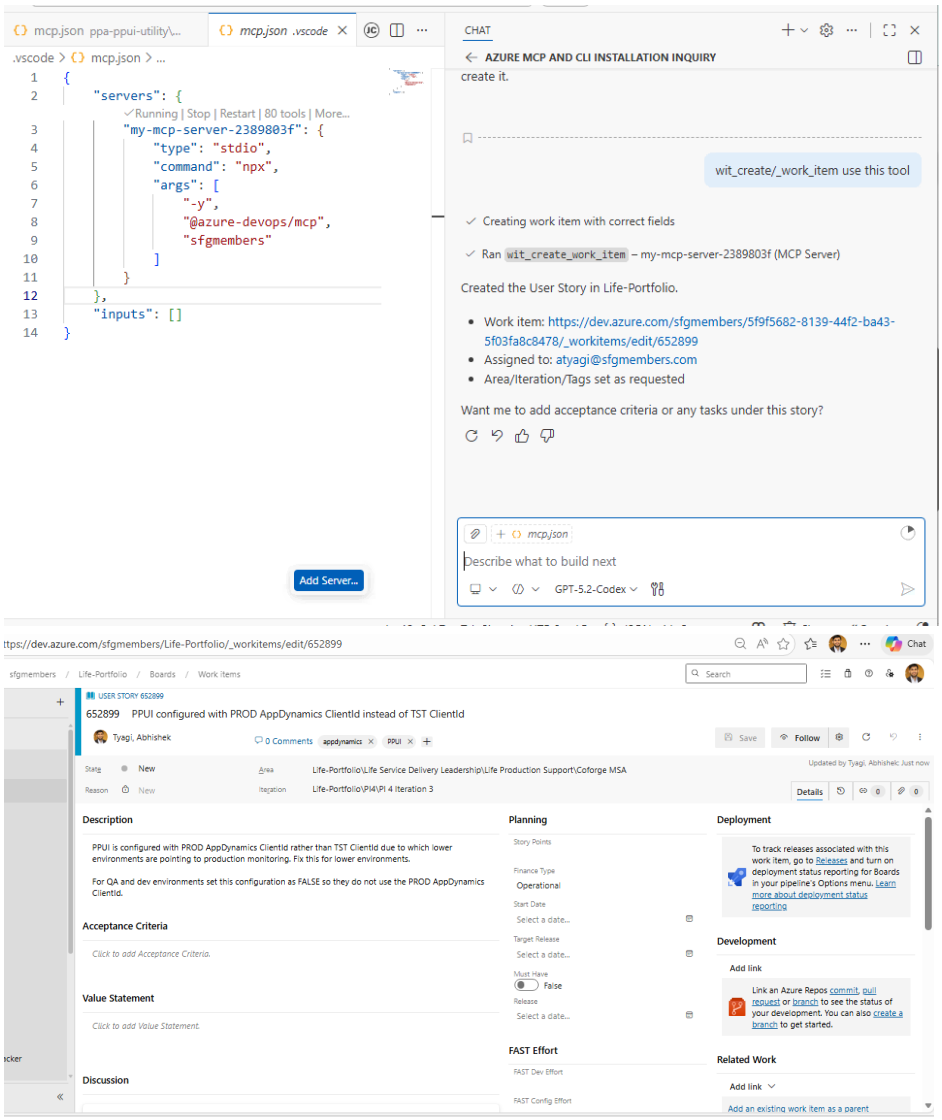


## Workflow & Tools Used

1. **Story Creation**

a. **MCP Tool:** `wit_create_work_item`

b. **Result:** Story created in Azure DevOps and assigned to self.



## 2. Code Changes

a. Implemented AppDynamics config fix using **GitHub Copilot**.

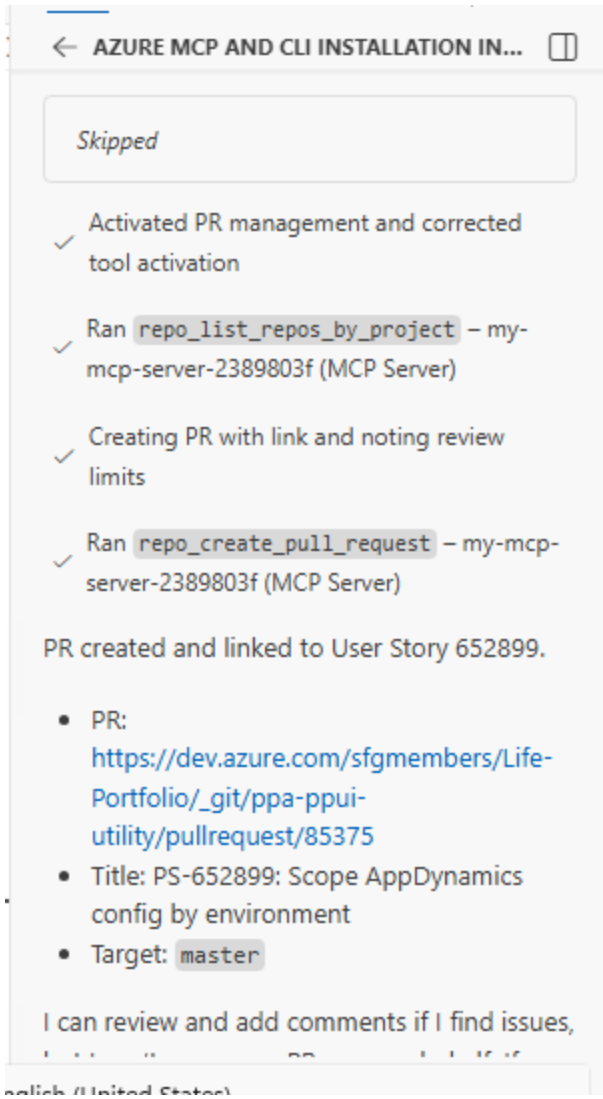
b. Committed and pushed changes to the feature branch.

## 3. Pull Request Creation

a. **MCP Tools:**

i. `repo_list_repos_by_project` – enumerated repositories in the ADO project.

ii. `repo_create_pull_request` – opened a PR from the feature branch to the target branch (e.g., `develop` or `main`).

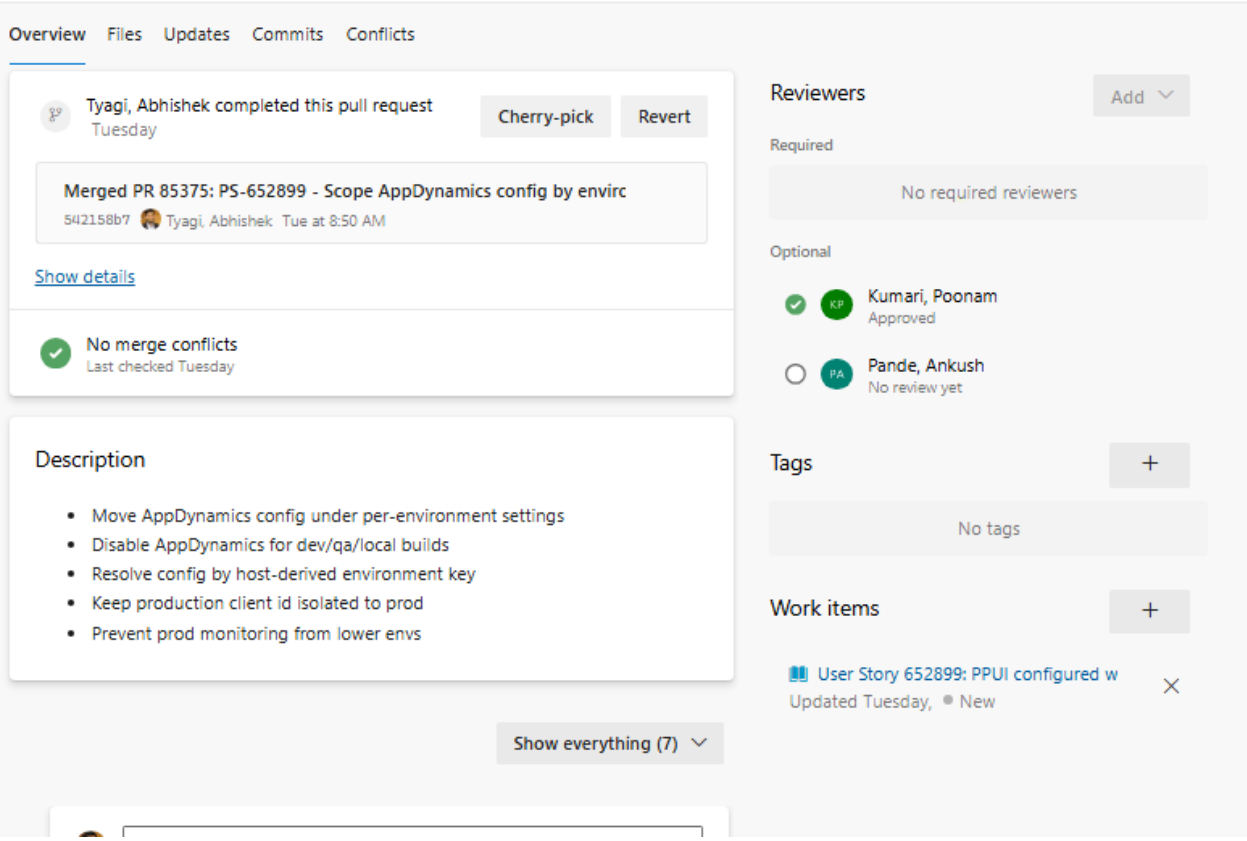


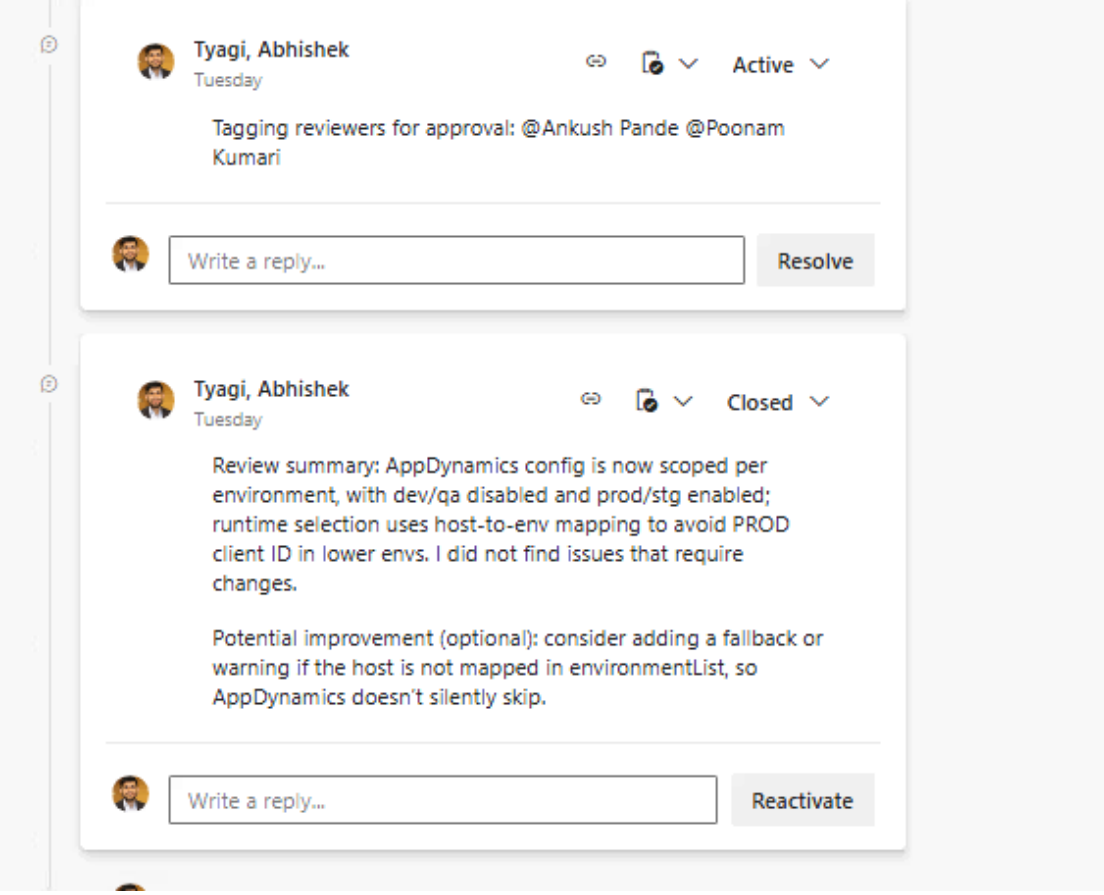
4. **Reviewer Management**
    a. **MCP Tools:**
        i. `core_get_identity_ids` – fetched identity IDs for tech leads.
        ii. `repo_update_pull_request_reviewers` – added TLs as PR reviewers.

- ✓ Activating identity search
- ✓ Ran `core_get_identity_ids` – my-mcp-server-2389803f (MCP Server)
- ✓ Ran `core_get_identity_ids` – my-mcp-server-2389803f (MCP Server)
- ✓ Ran `repo_update_pull_request_reviewers` – my-mcp-server-2389803f (MCP Server)
- ✓ Ran `repo_create_pull_request_thread` – my-mcp-server-2389803f (MCP Server)

Done.

- Added reviewers: Ankush Pande and Poonam Kumari.
- Added PR comment tagging them for approval.



## 5. PR Review Comments


a. **MCP Tool:** `repo_create_pull_request_thread` – posted a structured review comment to the PR
